Cloud Migration Readiness Assessment

A compliance-first self-assessment for organisations planning a move to AWS. 15 questions, about 5 minutes.

Name _____ Company _____

Role _____ Date _____

Tick one box for each statement, then write the points in the Score column. Add the points for each domain on the scorecard at the end.

0 Not started	**1** Planned	**2** Partly in place	**3** Fully in place and evidenced

1. Discovery and compliance scope

Statement	0	1	2	3	Score
1. You have an inventory of your applications, owners and dependencies. What runs where, who owns it, how critical it is, and which systems and third parties it connects to.	☐	☐	☐	☐	
2. Your data is classified, and you know where sensitive data lives. Personal, confidential, regulated and general data. Macie can help find sensitive data in S3.	☐	☐	☐	☐	
3. Legal, regulatory and contractual obligations are mapped to each workload. Data location, retention, encryption and audit requirements, confirmed with legal counsel or your regulator.	☐	☐	☐	☐	
AWS support: AWS Application Discovery Service, Migration Hub, Amazon Macie					**/ 9**

2. Strategy and planning

Statement	0	1	2	3	Score
4. Each workload has a chosen migration path. Rehost, replatform, refactor, retire or retain.	☐	☐	☐	☐	
5. Migration is planned in waves, starting with a low-risk pilot. Workloads grouped by dependency. Sensitive systems move last, once controls are proven.	☐	☐	☐	☐	
6. Business, security, finance, legal and IT owners are all involved. Migration is treated as a business project, not only a technical one.	☐	☐	☐	☐	
AWS support: AWS Migration Hub					**/ 9**

3. Landing zone and security baseline					
Statement	**0**	**1**	**2**	**3**	**Score**
7. A governed multi-account landing zone is designed before workloads move. Separate accounts for production, non-production, security and logging, with guardrails such as approved Regions.	☐	☐	☐	☐	
8. Access is centralised, uses MFA and follows least privilege. IAM Identity Center for workforce access.	☐	☐	☐	☐	
9. Encryption, key management and network design are defined up front. AWS KMS for keys, private subnets, VPC endpoints, and Direct Connect or VPN for hybrid connectivity.	☐	☐	☐	☐	
AWS support: AWS Organizations, Control Tower, IAM Identity Center, AWS KMS					**/ 9**

4. Data protection and resilience					
Statement	**0**	**1**	**2**	**3**	**Score**
10. You have decided where each category of data is allowed to live. Including backups, logs, snapshots and any cross-Region copies.	☐	☐	☐	☐	
11. Availability and recovery are designed in. Multi-AZ deployments, tested backups, and defined recovery objectives.	☐	☐	☐	☐	
12. Every wave has migration tooling, testing and a rollback plan. Tested for performance, security controls and rollback before cutover.	☐	☐	☐	☐	
AWS support: AWS Backup, Multi-AZ, AWS DMS, AWS MGN					**/ 9**

5. Security, governance and operations					
Statement	**0**	**1**	**2**	**3**	**Score**
13. Logging and threat detection are on from day one. CloudTrail, GuardDuty and Security Hub, with central logs.	☐	☐	☐	☐	
14. Resources are checked continuously against your policies, and evidence is collected. AWS Config, conformance packs and Audit Manager guard against drift and support audits.	☐	☐	☐	☐	
15. Roles, change control and cost ownership are clear after go-live. Shared responsibility is understood, changes use infrastructure as code, and costs are tagged by owner.	☐	☐	☐	☐	
AWS support: AWS Config, Security Hub, GuardDuty, Audit Manager, AWS Budgets					**/ 9**

Scorecard

Copy each domain total from the pages before. Divide your overall score by 45 to get your percentage.

Domain	Score	Out of	%
Discovery and compliance scope	_____	9	_____
Strategy and planning	_____	9	_____
Landing zone and security baseline	_____	9	_____
Data protection and resilience	_____	9	_____
Security, governance and operations	_____	9	_____
Overall	_____	**45**	_____

Your readiness level

Score	Level	What it means
0 - 11	**Foundational**	Most groundwork is still ahead. Start with discovery, data classification and the compliance scope before choosing tools.
12 - 22	**Developing**	Some planning exists. Close the gaps and build the landing zone before any workload moves.
23 - 33	**Established**	Solid base. Finish the open items and prove your evidence process before sensitive workloads move.
34 - 45	**Optimised**	You are well placed to migrate. Confirm each control with evidence and move in waves.

Priority gaps: list every statement you scored 0 or 1. Fix these first.

Turn your score into a migration plan

VCloudmaster helps businesses design, migrate and operate secure AWS environments with a compliance-first approach. We work alongside your legal, security, finance and IT teams and turn requirements into controls you can test and evidence.

- Cloud readiness and compliance assessment
- Migration strategy and wave planning
- Landing zone design and build, with built-in guardrails
- Migration execution with tested cutover and rollback plans
- Managed governance and operations after go-live

Book a migration readiness and compliance assessment with VCloudmaster.
