ENTERPRISE AI | UAE & GCC

Enterprise AI Readiness Assessment Checklist

15 questions across the six AWS Cloud Adoption Framework perspectives

Answer 15 questions, organized by the six AWS Cloud Adoption Framework (CAF) perspectives, to see how ready your organization is to move enterprise AI from pilot to production on AWS in the UAE and GCC.

1. Assessment details

Organization	
Business unit or use case assessed	
Assessment lead	
Participants (business, data, security, compliance)	
Target AWS Region / data residency requirement	
Assessment date	

2. How to score

Score every question 0, 1 or 2, then add up each perspective. Complete the assessment together with your business sponsor, data lead, security owner and compliance owner.

2	**Yes:** Fully in place and documented.
1	**Partially:** Started, informal, or limited to one team.
0	**No:** Not in place, or unknown.

3. Assessment questions

Business perspective

ID	Question	Score (0–2)
BUS-1	A specific business problem is defined for AI, with measurable KPIs such as cost saved, hours reduced or revenue gained.	
BUS-2	An executive sponsor owns the AI initiative and its budget.	
BUS-3	Use cases are ranked by value and feasibility, and a first pilot is chosen.	

People perspective

ID	Question	Score (0–2)
PPL-1	You have, or can access through a partner, the skills to build and run AI: data, engineering and MLOps.	
PPL-2	Affected employees have been informed, and training and change management are planned.	

Governance perspective

ID	Question	Score (0–2)
GOV-1	Applicable laws and regulators are mapped to the use case (UAE PDPL, DIFC, ADGM, Saudi PDPL, sector rules), and legal has reviewed it.	
GOV-2	An AI policy covers acceptable use, human review of high-stakes decisions, and explainability.	
GOV-3	AI and cloud spend has a budget, an owner and regular cost reviews.	

Platform perspective

ID	Question	Score (0–2)
PLT-1	Data for the first use case is identified, high quality, owned, and accessible from a central platform.	
PLT-2	An AWS environment is set up with a sound account structure, and your team has assessed Amazon Bedrock and Amazon SageMaker for the use case.	
PLT-3	AI can connect to core systems (ERP, CRM, documents) through APIs or an integration layer.	

Security perspective

ID	Question	Score (0–2)
SEC-1	Data is encrypted at rest and in transit, with least-privilege access and audit trails.	
SEC-2	Data is classified, and residency controls keep sensitive data in approved locations.	

Operations perspective

ID	Question	Score (0–2)
OPS-1	Someone is accountable for monitoring model accuracy and drift, and for retraining.	
OPS-2	Post-launch support and incident response are defined, and the pilot has success criteria and a decision point to scale, adjust or stop.	

4. Scoring card

Copy each perspective's subtotal from the tables above. The total is out of 30.

CAF perspective	Questions	Max score	Your score	Rating
Business	BUS-1 to BUS-3	6		
People	PPL-1 to PPL-2	4		
Governance	GOV-1 to GOV-3	6		
Platform	PLT-1 to PLT-3	6		
Security	SEC-1 to SEC-2	4		
Operations	OPS-1 to OPS-2	4		
Total	**15 questions**	**30**		

Gap below 50% of max	**Emerging** 50–79% of max	**Strong** 80% or more

5. What your score means

Total score	Readiness level	Recommended next step
0–12	**Foundation stage**	Do not build yet. Define one business case, assess your data, and map compliance requirements.
13–21	**Developing**	Close the gaps in your weakest perspectives, then run a time-boxed pilot with agreed success metrics.
22–30	**Ready to scale**	Move your best pilot to production, integrate it with core systems, and set up ongoing monitoring and cost control.

A high total can hide one weak area. A Gap in the Governance or Security perspective is a reason to pause, whatever your total.

TURN YOUR SCORE INTO A PLAN

Move enterprise AI from pilot to production with VCloudmaster

VCloudmaster is an **AWS Advanced Tier Partner** helping enterprises across the UAE and GCC deliver AI with security, compliance and measurable ROI built in.

- **Readiness review:** we go through this scorecard with your team and rank your gaps.
- **Use case prioritization:** we pick the first AI project with the strongest business case.
- **Build on AWS:** we deliver on Amazon Bedrock and Amazon SageMaker, with regional data residency in mind.
- **Integrate and operate:** we connect AI to your core systems and manage performance and cost after launch.
