Our AI Practice

Generative AI, Agentic AI, and intelligent business automation — built on AWS-native services.

Generative AI

Enterprise knowledge assistants, RAG applications, AI-powered search & Q&A

Agentic AI

Multi-step reasoning, workflow automation, ERP/API interaction, human-in-the-loop

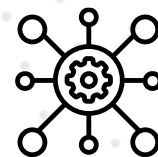

Intelligent Documents

Invoices, Bills of Lading, Packing Lists — OCR and document intelligence

AI Content Automation

Product descriptions, classification, enrichment — English & Arabic content

Enterprise Integration

ERP, CRM, databases, APIs — secure, scalable application workflows

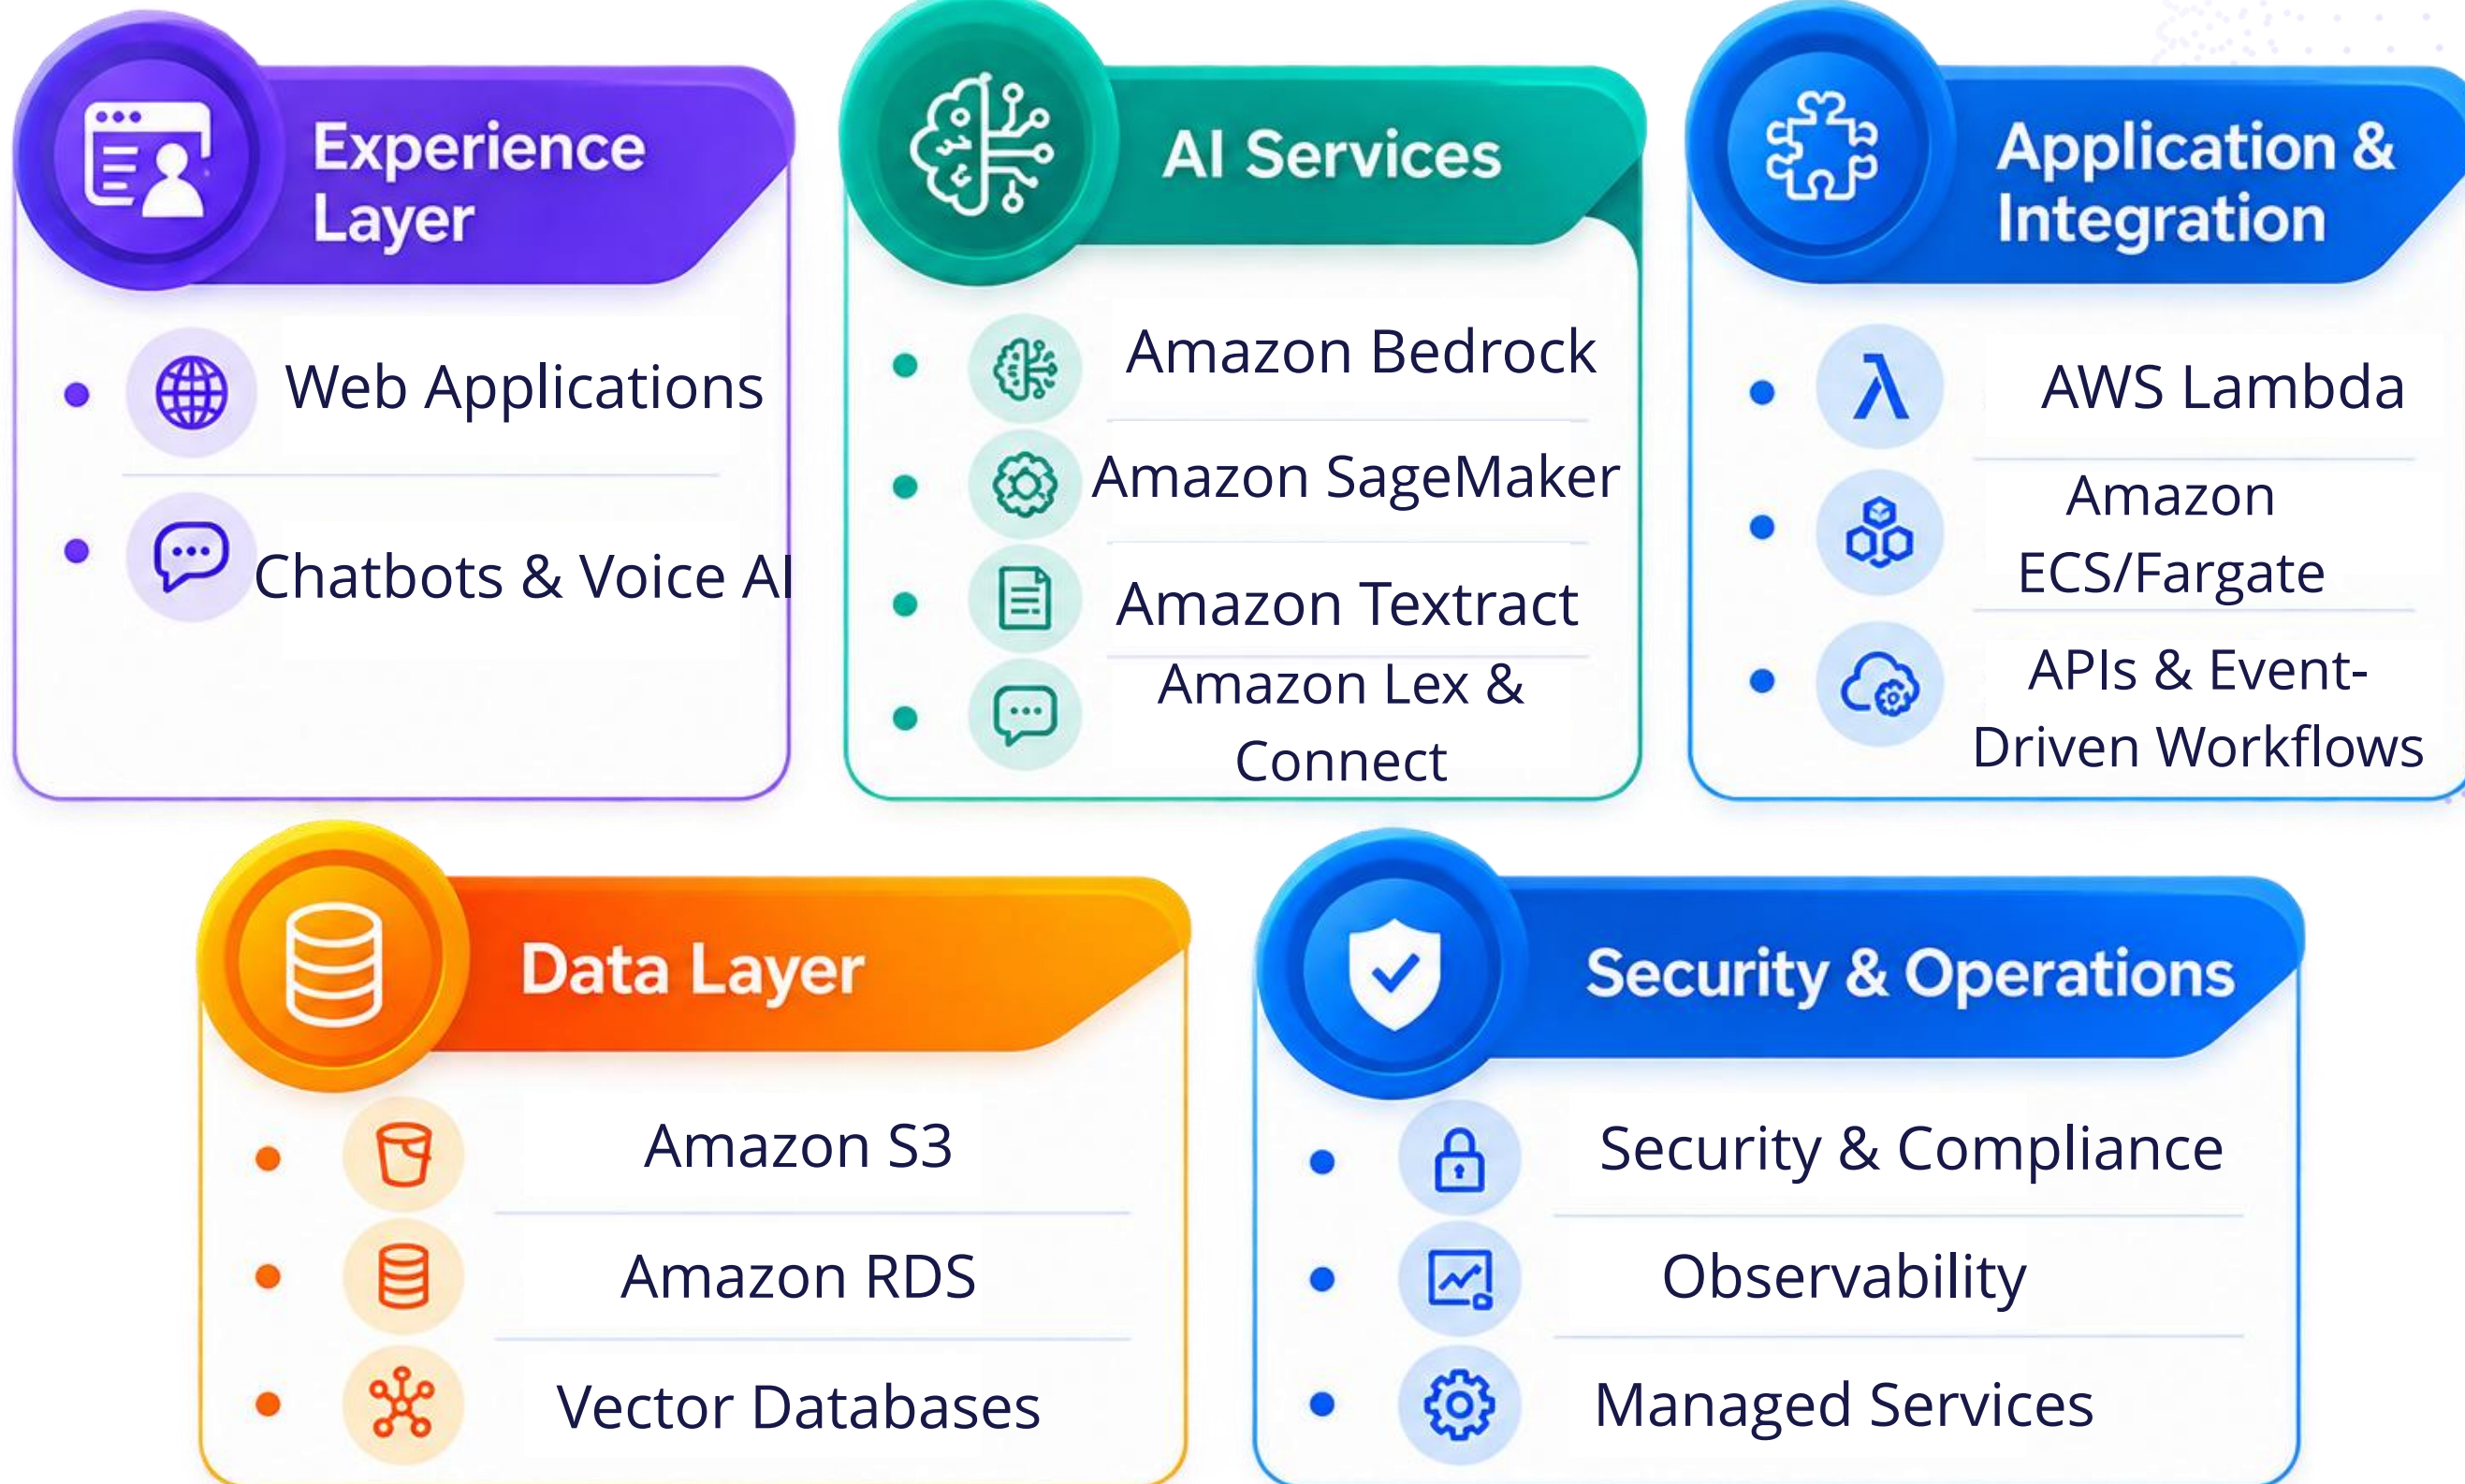

AWS-Native Delivery

Amazon Bedrock, Textract, Lambda, S3 — security, observability, managed services

AWS AI Technology Stack

Generative AI, Agentic AI, and intelligent business automation — built on AWS-native services.

What Differentiates VcloudMaster

A business-process-first approach to AWS AI — not just smarter interfaces, but automated workflows that drive real outcomes.

Business-Process-First AI

Start with the business process and automate the workflow — not just the interface.

Agentic AI + Enterprise Integration

Agents reason across multi-step workflows, interacting with ERP, CRM, databases, and APIs.

AWS-Native Architecture

Leverage managed AWS services for scalability, security, reliability, and operational efficiency.

Human-in-the-Loop

Keep user validation and control for important business transactions.

PoC → Production

Validate business value through practical proof-of-concepts before full production investment.

Petty Cash Management Automated Expense Tracking – Food Industry

The Challenge

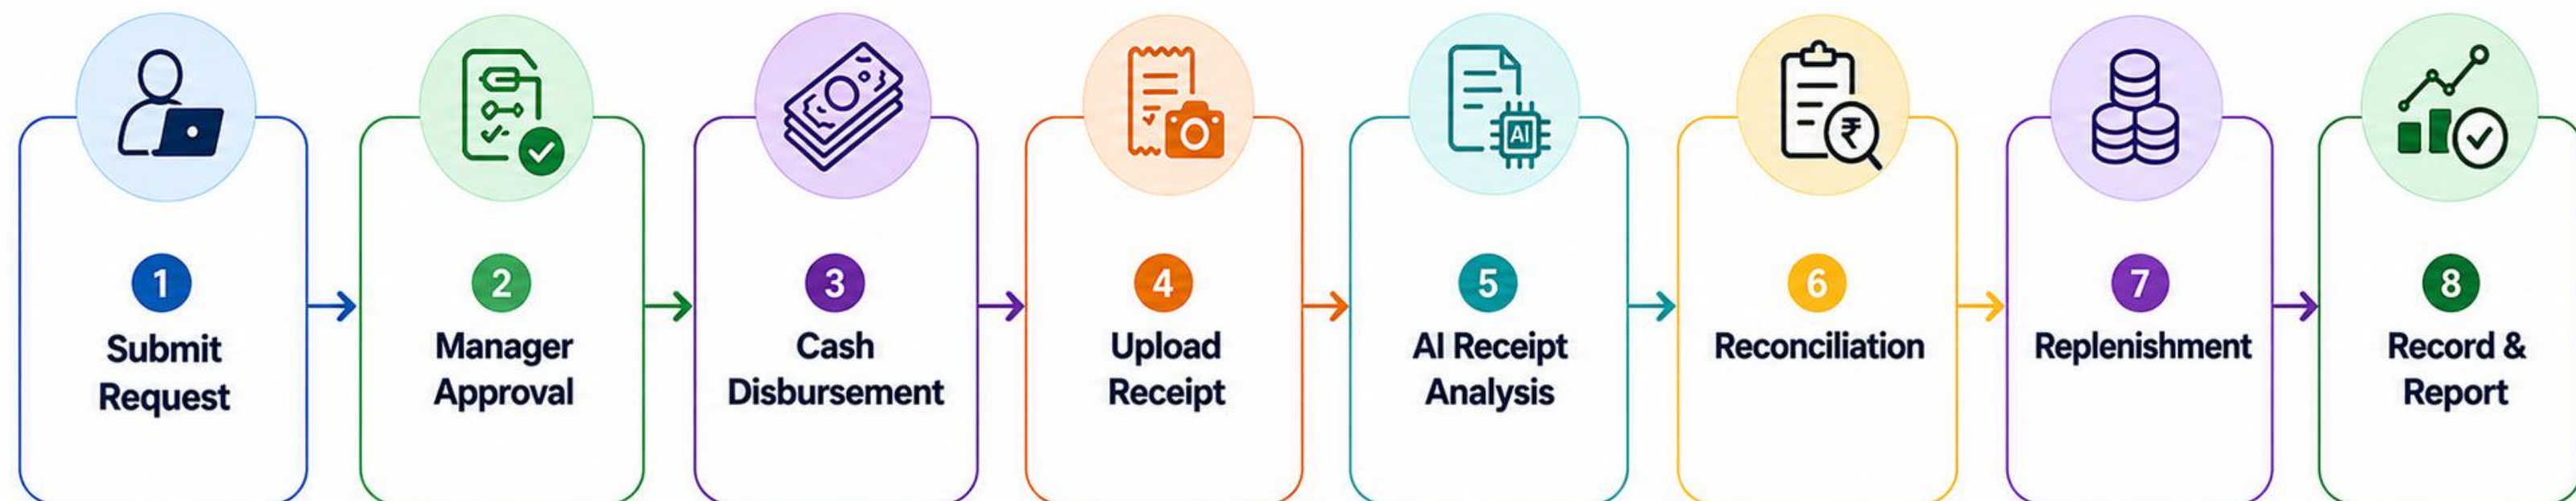

Manual petty cash tracking led to slow reimbursements, lack of transparency, and poor audit trails, causing frustration and inefficiency.

The Solution

An AI-powered system for automated receipt processing with intelligent validation and real-time integration into the accounting system.

Business Outcomes

- Faster employee reimbursements
- Improved compliance and audit readiness
- Reduced manual data entry and reconciliation
- Enhanced financial visibility and control

Digitalizing Material Requests Forms Ship Building Industry

The Challenge

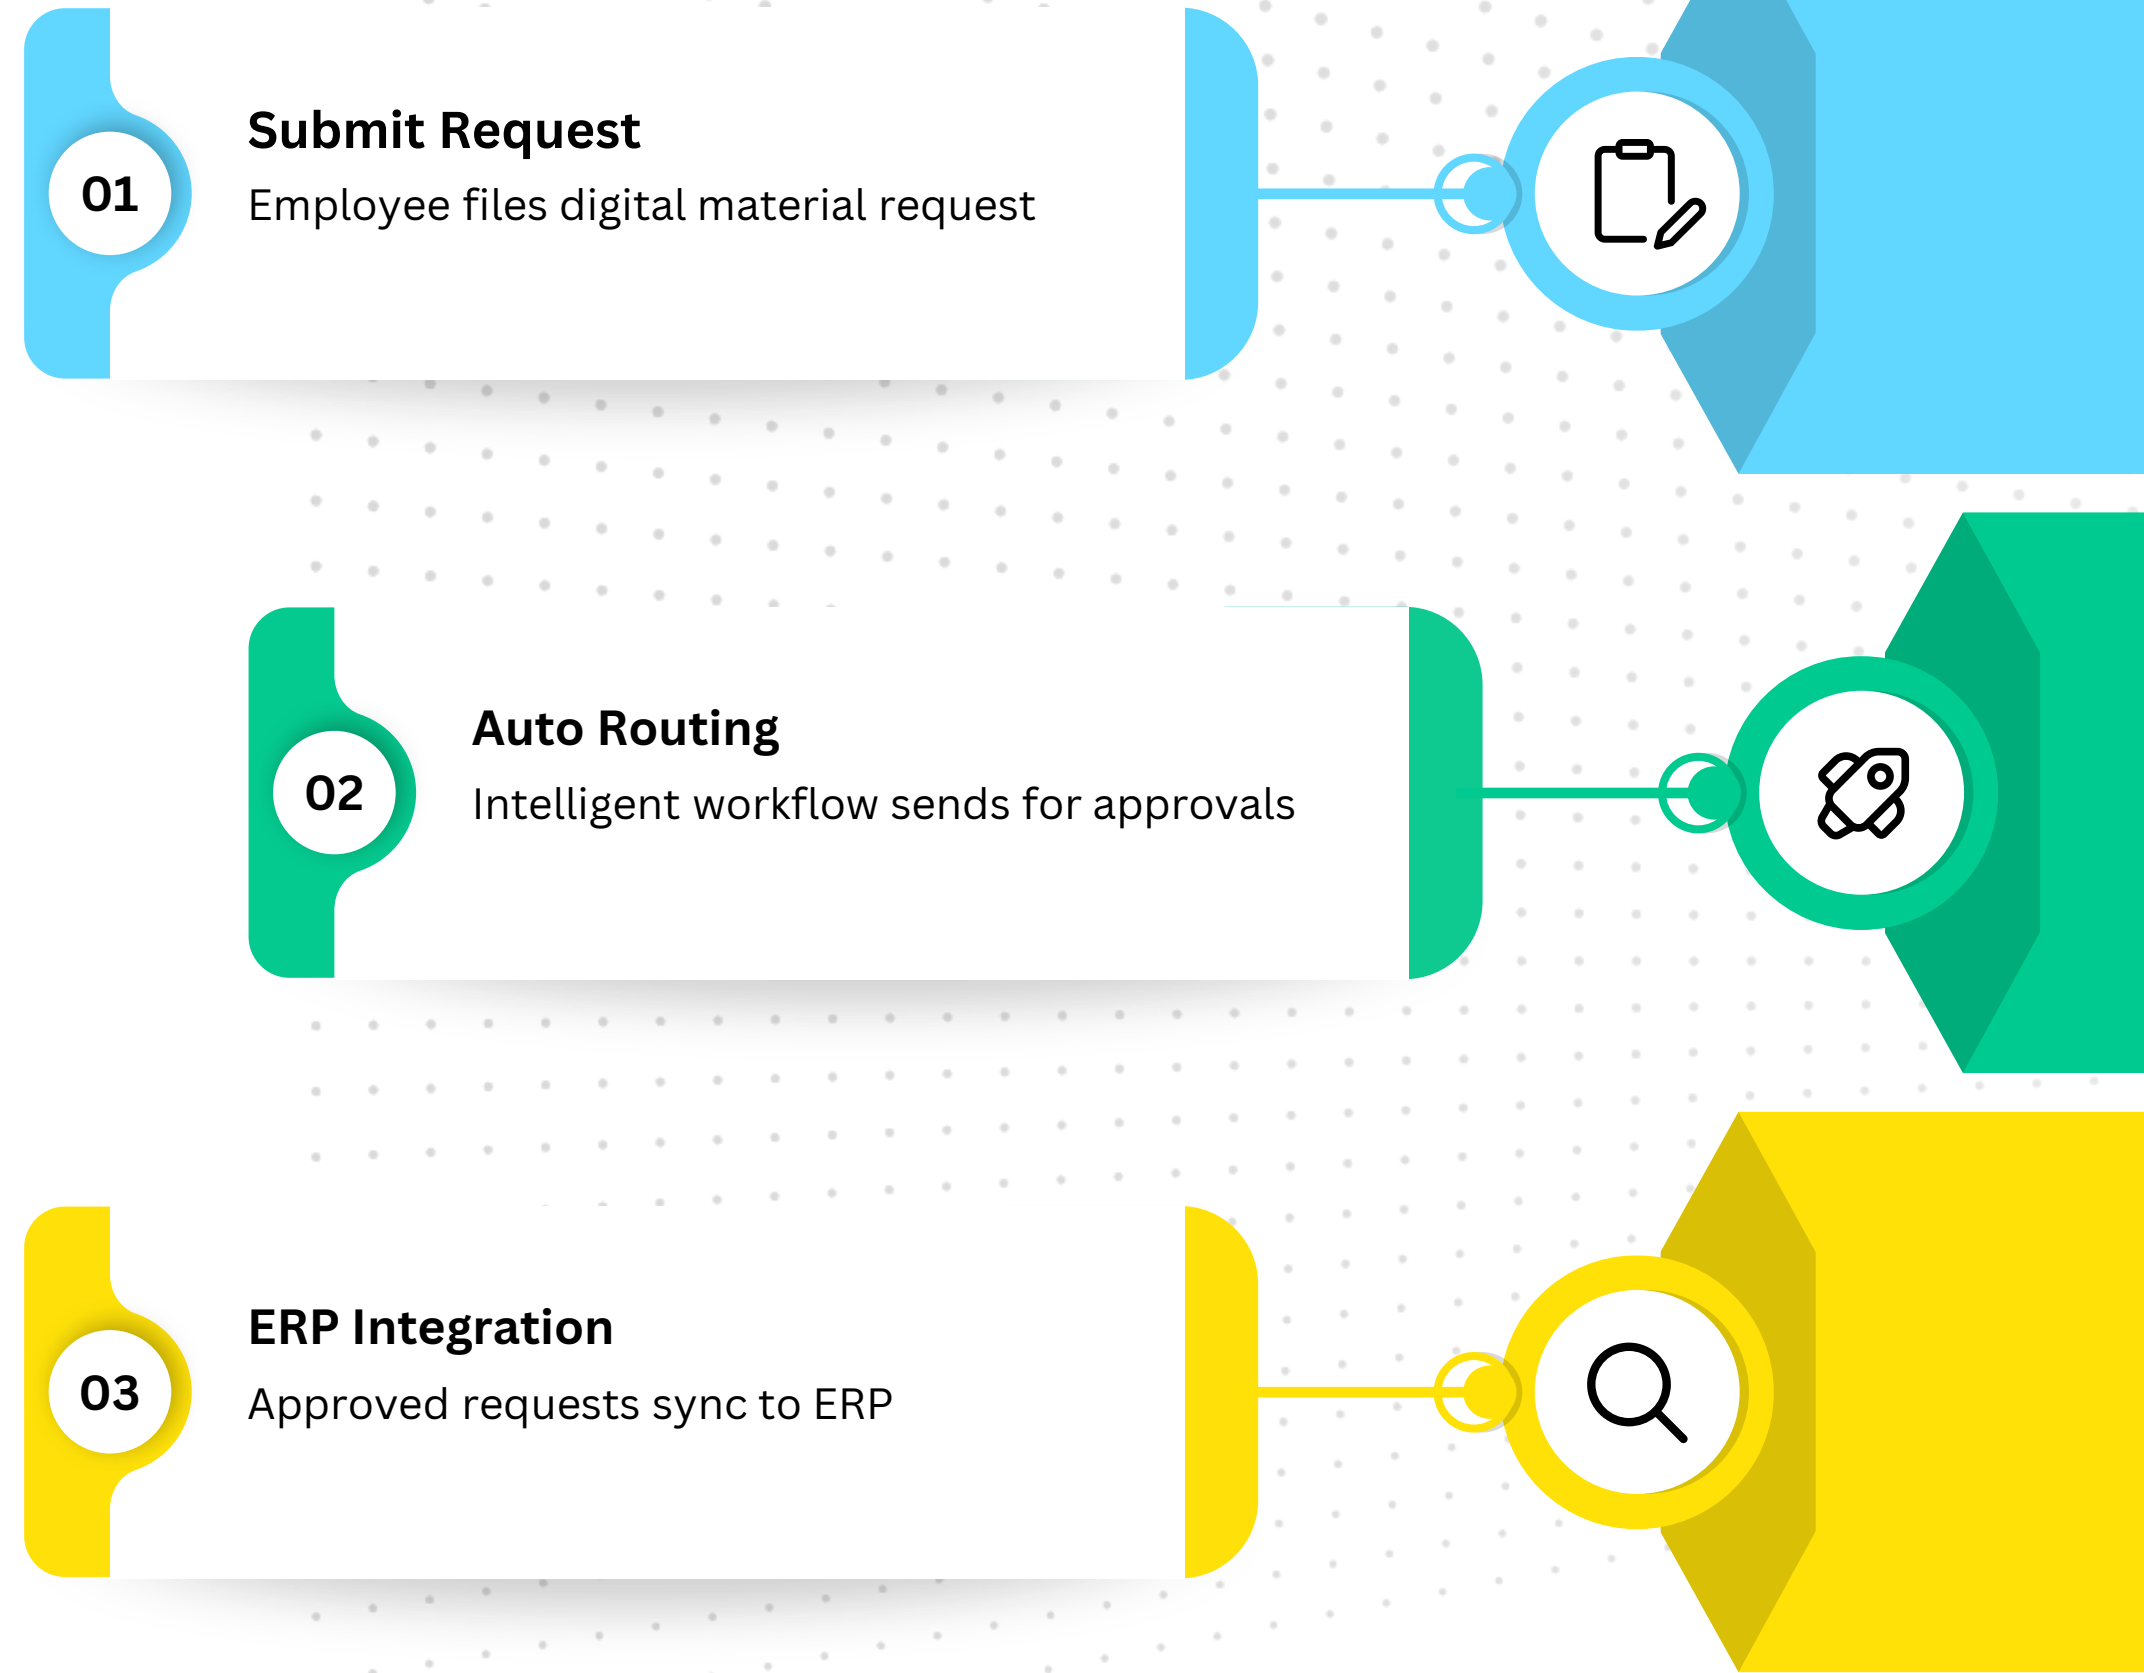

Paper-based Material Request forms created manual effort, slower approvals, and limited visibility across the organization.

The Solution

Digital request submission with intelligent workflow support for approvals and downstream ERP integration.

Business Outcomes

- Faster processing and streamlined approvals
- Improved visibility into request status
- Reduced paper-based work
- Connected workflow to enterprise/ERP processes

01

Submit Request

Employee files digital material request

02

Auto Routing

Intelligent workflow sends for approvals

03

ERP Integration

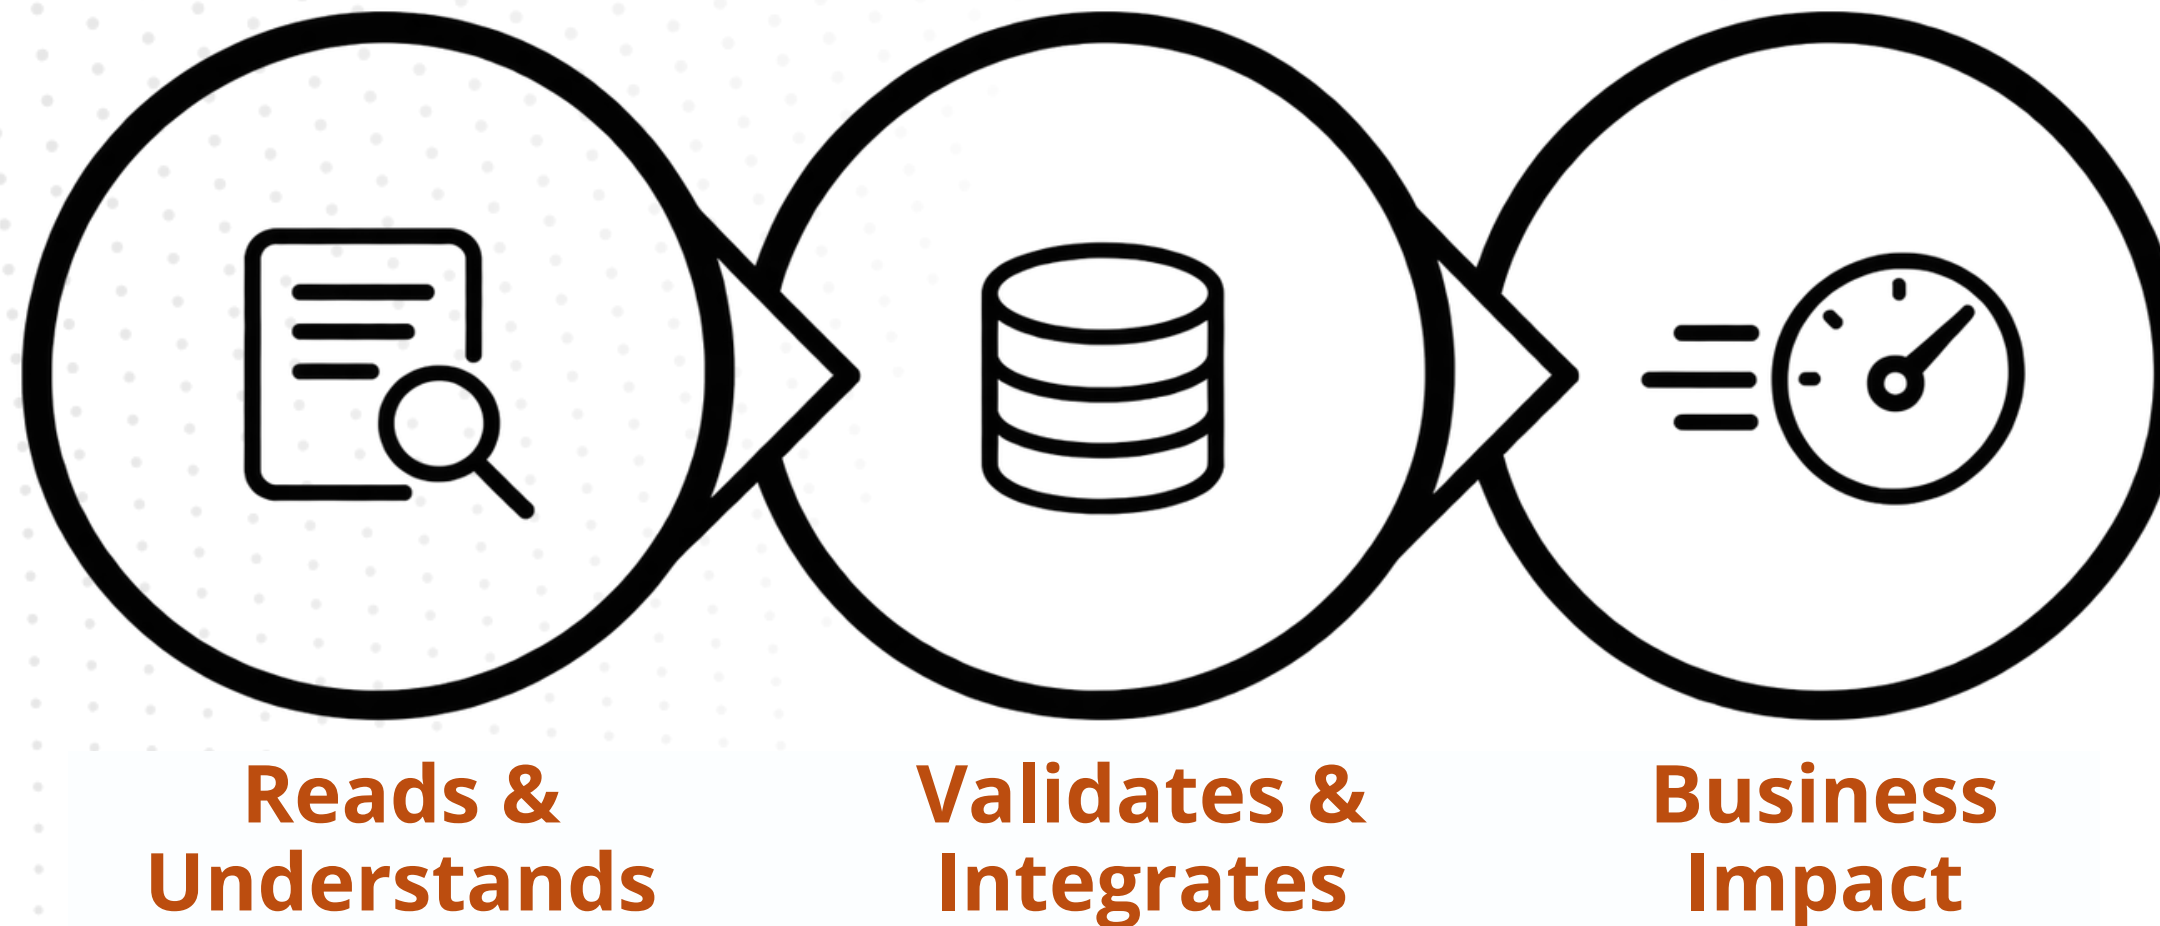

Approved requests sync to ERP

AI Order Processing Assistant Manufacturing Industry

AI reads unstructured email content and supporting documents, structures extracted information and pushes validated data into ERP platforms such as Odoo and SAP — with human validation retained before final submission.

Processing time reduced from 12–15 minutes to under 5 minutes, with significantly improved accuracy and far less manual data entry.

AI-Powered Audit Agents Audit & Consultation Firm

Intelligent audit agents assist auditors, managers, and partners by automating repetitive tasks, reviewing financial statements, and monitoring compliance — with enterprise-grade security and private deployment options.

Intelligent Audit Agents

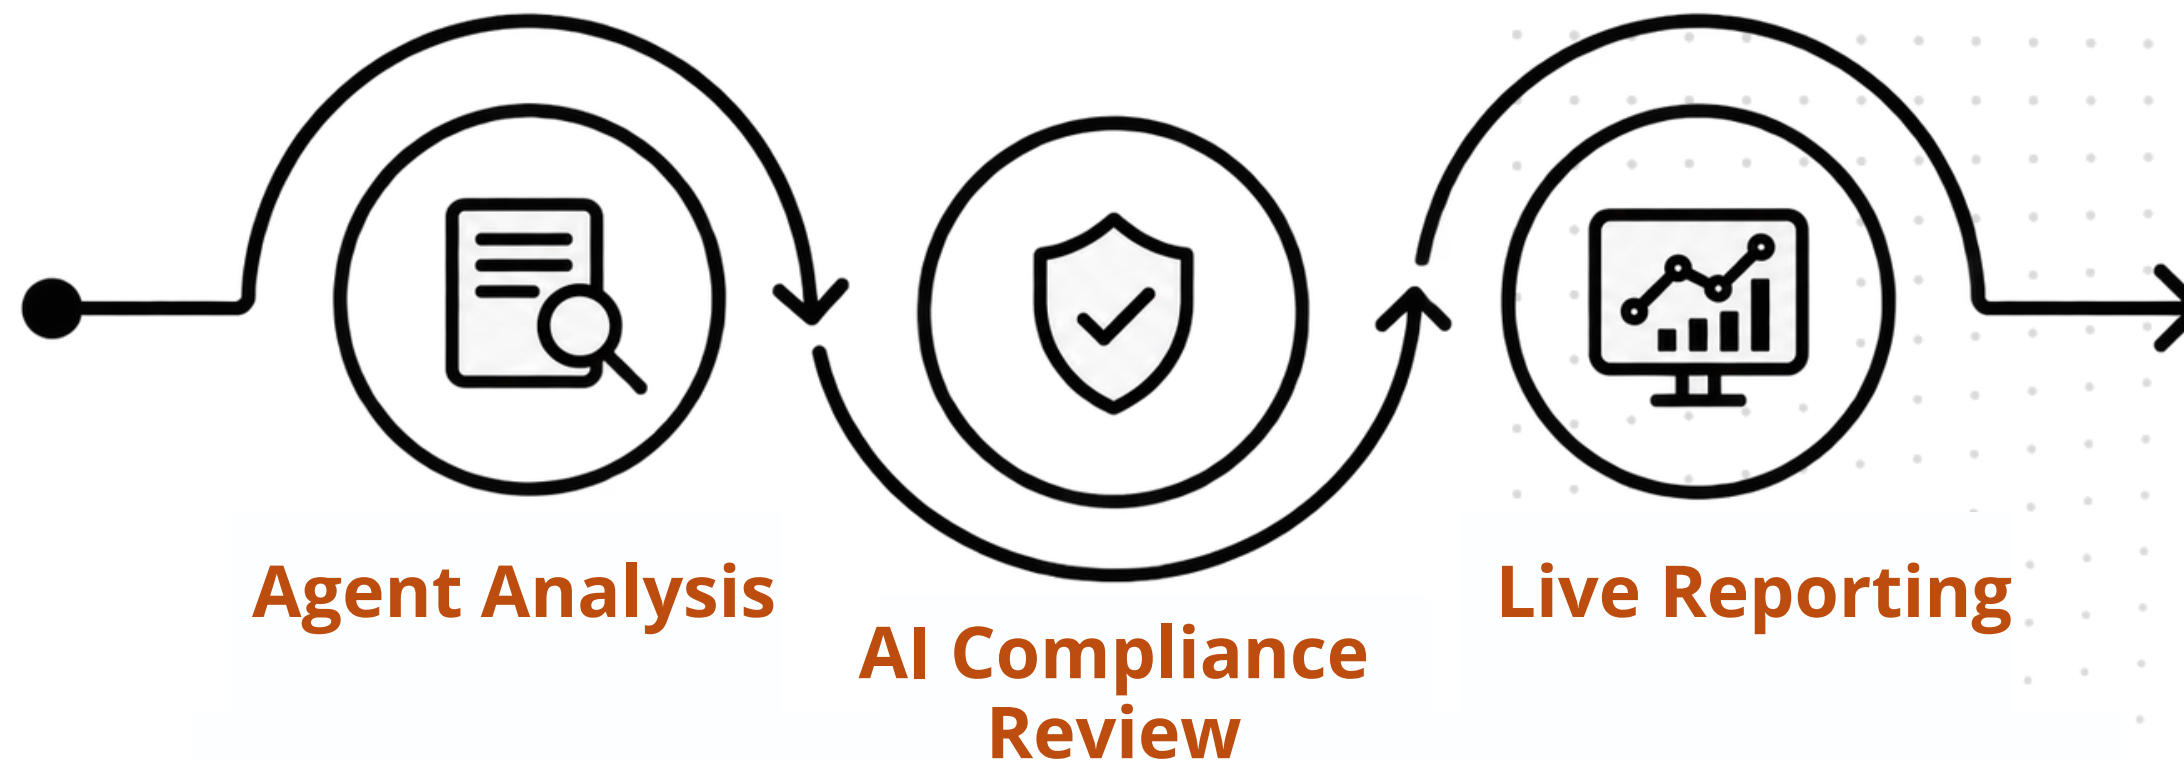

Automate repetitive tasks, review financial statements and working papers, perform risk assessments, and monitor compliance.

Compliance & Knowledge

IFRS · ISA · ISQM · UAE regulations.
AI knowledge assistance with
source citations from accounting
and auditing standards.

Engagement Intelligence

Real-time dashboards for audit
progress, risks, and compliance;
automated file completeness and
disclosure checks.

Why Partner With VcloudMaster

AWS Competency Partner

Proven expertise across SMB, Networking Consulting, and Agentic AI — delivering secure, scalable, and business-focused AWS solutions.

Business-First AI Design

Solutions start with your processes — not technology for its own sake

End-to-End Delivery

From proof-of-concept to production, with 24/7 managed services and support

Security & Compliance

Enterprise-grade security, audit trails, and compliance expertise built in from day one

GIVING BACK, BUILDING FUTURES VCLLOUDMASTER'S CSR INITIATIVE

VCloudMaster, we believe that technology creates progress, but compassion creates lasting impact. As part of our Corporate Social Responsibility (CSR) initiative, our team had the privilege of visiting Saraswathi Foundation, India to distribute books and lunch boxes to children in the orphanage.

Every book represents an opportunity to learn, dream, and build a brighter future, while every lunch box is a reminder that even small acts of kindness can make a meaningful difference. Through this initiative, we reaffirm our commitment to supporting the communities we serve and empowering the next generation.

This commitment closely aligns with AWS's principle of "Success and Scale Bring Broad Responsibility." As organizations grow and innovate, they also have a responsibility to create positive social impact, uplift communities, and invest in opportunities that improve lives. By combining innovation with empathy, we can help build a future where technology not only transforms businesses but also enriches society.

Together, we are creating a future where every act of giving inspires hope, every opportunity empowers a child, and every step forward is shared with the community.

Thank you
